

Insight 1 — Central LA is the Highest-Risk District Requiring Priority Resource Allocation

(Based on: Overview Dashboard — Top Crime Areas bar chart)

*The dashboard reveals that the Central LAPD district recorded the highest number of crime incidents across **2023–2024**, significantly exceeding all other 21 districts, followed closely by Pacific and Southwest. With a total of **358,750** reported incidents citywide and the top three areas accounting for a disproportionate share.*

*LAPD management should prioritize patrol deployment, rapid response staffing, and crime prevention budgets toward **Central, Pacific, and Southwest divisions**. A data-driven reallocation of resources to these hotspot areas could yield the greatest reduction in overall citywide crime rates.*

Insight 2 — An Extremely Low-Resolution Rate of 7.5% Signals a Critical Investigative Capacity Gap

(Based on: Overview Dashboard — Crime Distribution by Status donut chart + KPI cards)

*Of the **358,750 total crimes recorded**, only **27,000** were resolved — representing a resolution rate of approximately **7.5%**. The donut chart confirms that **82.89%** of cases remain classified as "UNK" (Unknown/Unresolved), with Adult Arrests accounting for **just 7.51%** and Juvenile Arrests under **1%**. This critically low clearance rate signals a serious investigative resource gap within the LAPD.*

Management should consider increasing detective staffing, investing in forensic technology, and establishing dedicated follow-up units for high-volume crime categories to improve case resolution and strengthen public trust in law enforcement effectiveness.

Insight 3 — Crime Volume Peaks in January and Follows a Declining Seasonal Trend Through Year-End

(Based on: Trend Analysis — Monthly Crime Trend column chart + Daily Crime Trend line chart)

*The Monthly Crime Trend chart shows crime incidents peaking sharply in **January 2023 at approximately 37,000 cases**, then declining steadily through the remainder of the year toward December. The Daily Crime Trend further confirms this pattern, showing a consistent downward trajectory **from mid-2023 through late 2024**. This seasonal pattern suggests that the **beginning of the year represents the highest-risk period** for crime in Los Angeles.*

LAPD should implement heightened patrol presence, increased community engagement programs, and proactive crime prevention initiatives specifically during Q1 (January–March) each year to counteract the annual surge, while using the lower-crime months to conduct officer training and strategic planning.
